Ribs

Indication: Pain.

Comment:

4views of the left ribs were obtained along with 1 view the chest. There is no evidence of fracture, dislocation or destructive osseous pathology.

A single AP projection of the chest demonstrates elevation right hemidiaphragm. There is some interstitial prominence within the right upper lobe and right midlung field which was seen on the previous exam performed on May 3, 2022. Multiple surgical clips are seen in the right suprahilar region.. There is no evidence of a pneumothorax.

Impression:

1. No evidence of rib fracture.
2. Elevation the right hemidiaphragm.
3. Interstitial prominence within the right upper lobe and right midlung field which was seen on the previous exam.
